

SafeGuard Enterprise

Central data encryption and protection

- ▶ Makes regulatory compliance easier with policy enforcement and reporting
- ▶ Stops data loss by controlling access to your PC's ports and storage devices
- ▶ Delivers better data security through proven encryption algorithms and performance
- ▶ Makes logging in more convenient and secure with single sign-on (SSO)—there's just one password for users to remember for encryption and their OS
- ▶ Provides key management that lets authorized users share data securely and easily
- ▶ Saves time because you set up and manage all your data protection policies using our central console
- ▶ Manages computers running Opal self-encrypting drives or BitLocker
- ▶ Uses the latest processor technology to make sure that encrypted machines are faster than ever

With Sophos SafeGuard Enterprise, you'll protect the data on your desktops, laptops, removable media, file shares and to the cloud, as well as preventing data loss. Stopping data breaches and making compliance simpler without getting in the way. And you save time, because your data protection is easy to manage from one central console.

Protect your information and manage compliance

We make it simple for you to manage your security policies and data protection effectively across your organization. You'll be ready to comply with data privacy laws and keep the wrong people from seeing your organization's confidential information.

- Uses our single console to manage full-disk encryption, removable-media encryption, file-share encryption, cloud-storage encryption, as well as port control and DLP
- Provides up-to-date security status for all your devices. Get reporting and auditing that lets you monitor and ensure compliance with internal policies and external regulations
- Controls access to physical and wireless interfaces (USB, FireWire, Wi-Fi) and storage devices (MP3 players and removable media)

Award-winning encryption

Benefit from our award-winning encryption that's already protecting millions

Uses internationally recognized encryption standards for full hard-disk encryption

Allows multiple users to share encrypted computers without sharing their passwords

Encrypts data in the background so that protection doesn't interrupt your users' work

Offers a fast initial encryption option that encrypts only the parts of your hard drives with data, saving you significant time when encrypting large disks

Prevents unauthorized users from reading lost or stolen media

Ensures fast and secure authentication, using biometric fingerprint and cryptographic token support

Uses the latest processor technology from Intel, which means that i5 and i7 computers running our software are quicker than ever

Let users collaborate securely with key management

Our key management works behind the scenes. That means it's easy for your authorized users to securely share data across PCs, removable media and email attachments, while you maintain the control you need

Manages storing, sharing, exchanging and retiring of keys from our central console

Enables easy data access and recovery during an emergency—for example, if a user's PC crashes

Allows secure and quick access to encrypted disks or files on other systems via automated key reassignments in our console

Stay productive with fast data recovery

Get back the time you're spending on data recovery, even when your users forget passwords, lose their authorization or leave your organization

Lets users recover passwords quickly using challenge/response questions over the phone or via a web portal

Allows users to recover forgotten passwords with local self-help, so they don't lose time waiting for an admin to reset their passwords

Recovers broken operating system configurations on encrypted disks when using the external boot option with Windows PE

Deploy rapidly, from one location

For central, unattended installation, use standard Microsoft Installer Packages to deploy SafeGuard Enterprise to your users' PCs. And we make your rollout easier because there's no end-user involvement during installation.

Grow when you're ready

You can license the SafeGuard Enterprise modules that fit your organization's needs right now. Add more when you're ready. We make sure it all works together, and that you can manage everything from the same console.

SafeGuard Enterprise Modules

Management Center

Implements and enforces a common, organization-wide security policy framework, providing you with a central point of management control in mixed IT environments.

Device Encryption

Transparently encrypts data on laptops, desktops and external media, protecting your users against unauthorized access, loss or theft of data.

Data Exchange

Ensures the secure exchange of data on removable media with your business partners and customers, even if they don't have a SafeGuard application installed.

Encryption for Cloud Storage

Encrypts files uploaded to cloud storage services from managed computers. We also include readers for opening these files on Apple iOS and Android devices.

Configuration Protection

Gives you central control over the configuration of your fixed and mobile devices. Stop the installation of unwanted software and unauthorized configuration changes.

Partner Connect

Manages your external data-security applications, such as Windows BitLocker Drive Encryption.

Encryption for File Shares

Encrypts user data across work groups. Protect your data on local drives and network servers, at both the file and directory levels.
