

Guardian Digital™ EnGarde Workgroup Suite™ Versatility and Productivity Meet Security

Overview

The EnGarde Secure Workgroup Suite is the perfect compliment to EnGarde Secure Linux Professional, the secure Internet platform for building an online presence. Increase productivity and security with this comprehensive connectivity solution. Browser-based administration, file and print sharing, network management, VPN support, local and remote e-mail operations, engineered to be secure, make this the winning solution for Internet and intranet connectivity.

Using the sophisticated and easy to manage integrated Internet connectivity software in existence. Built-in security, software updates and support marks the EnGarde Secure Workgroup Suite as the cost effective and proven platform for global business communications.

Build a low-cost alternative to proprietary file & print solutions, access corporate network remotely and securely, and manage system access

Complete Corporate Productivity Solution

The EnGarde Secure Workgroup Suite is a complete package that extends security and productivity features to the corporate network. Robust and easy to set up, this workgroup productivity suite requires no previous Linux experience to configure or maintain.

Features & Benefits Overview

- Build Windows file and print shares using the Web-based management tools to provides complete replacement for Windows NT and 2000 servers.
 - Simple and secure remote administration abstracts the difficult process of configuring a secure system, easing system setup and administration.
 - Perform Windows Domain Controller functions to integrate with existing environments or seamlessly replace Windows NT and 2000 servers.
 - Build Virtual Private Networks for workgroups using PPTP and client software included with all versions of Windows.
 - Effortless backup system provides protection from costly disk failures.
 - WebMail access for mobile office staff and secure e-mail access using standard e-mail clients.
 - Dynamic network management using DHCP automatically configures workstation network information
 - Guardian Digital Secure Network provides reliable access to the latest software updates, security notifications, product releases, and more, directly from Guardian Digital.
 - Firewall and VPN management performed using secure Web-based management protects corporate assets from malicious intruders.
 - Publish internal resources to the Internet using the integrated connection sharing and Network Address Translation (NAT) features of EnGarde Secure Professional.
 - Engineered to be secure, EnGarde Workgroup Suite includes spoofing detection, Trojan horse attacks, and hundreds of other threats.
-

Guardian Digital™ EnGarde Secure Workgroup Suite™

Key EnGarde Secure Workgroup Suite Features

Robust and Reliable Plug-and-Play Solution

Within minutes you can easily integrate EnGarde Secure Professional and EnGarde Secure Workgroup into an existing corporate environment, or expand to new departments that were limited due to licensing fees and lack of resources. Virtually eliminate the need for dedicated network administrators.

Simple and Secure Remote Administration

The WebTool abstracts the difficult process of configuring a secure system, easing system setup and administration.

Secure Remote Access

Allow mobile users to securely access their email and corporate data using the PPTP 128-bit encrypted virtual private networking. The Web-managable interface provided with EnGarde enables the ability for remote users to dial into a local Internet service provider to connect securely to their corporate network through the Internet.

Filesystem and Resource Quota Support

EnGarde Secure Workgroup includes the ability to restrict the amount of disk space available to a particular user or group. In addition, EnGarde can limit the amount of memory, number of processes, and other aspects of your EnGarde system, all through a Web-based manager.

Broadband Connectivity

The point-and-click interface provided by EnGarde Secure Workgroup enables easy connectivity to DSL routers and Cable modems for inexpensive access to the Internet.

Secure Cross-Platform Support

Using the File and Print Manager, create a seamless replacement for Windows NT or 2000 file and print services, including Primary Domain Controller support. Exchange information between clients using the Web-managable FTP server. Effortlessly manage user and group accounts and filesystem quotas.

Automatic Network Management

EnGarde Secure Workgroup configures your internal network using DHCP to automatically configure clients to obtain IP address information, eliminating the need for client management.

Effortless Backup System

Avert data loss disasters with the versatile backup solution. Schedule a full or incremental system backup to local tape or download to remote workstation.

Connection Sharing and Address Translation

Dynamic and Static address translation included with EnGarde Secure Professional enable hosts with unregistered IP addresses to function as Internet-addressable hosts. The gateway firewall feature protects internal hosts from unauthorized access. Spoofing detection seamlessly protects internal hosts against spoofing attacks by hostile untrusted hosts.

Email Services and WebMail

Securely access corporate email using secure IMAP and POP. Use a standard Web browser in secure mode to access corporate email while on the road or away from your desktop.

Contact us today to learn how we can help your company maintain the security of your online assets.
