

How Safe Is Your Mobile Data in the Cloud?

Lots of IT professionals confess they aren't securing mobile data shared by users and stored on cloud services. See the results of our survey of 700 IT professionals* and learn more at sophos.com/mobile.

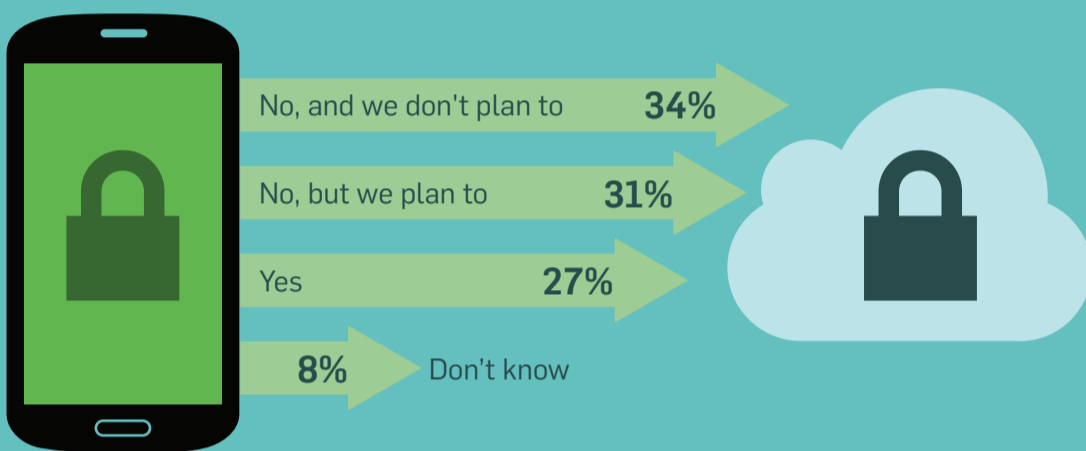

1

How does your organization deal with sharing data to personal cloud share services from company-issued devices?

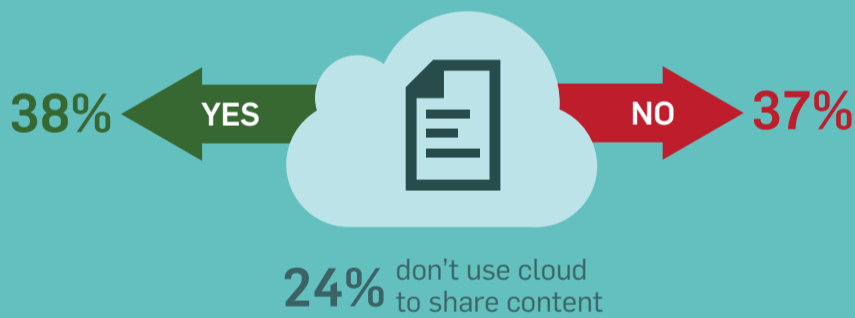

2

Does your organization currently encrypt data that you share between the cloud and your work mobile devices?

3

Do you feel secure sharing or collaborating corporate content between the cloud and your mobile devices?

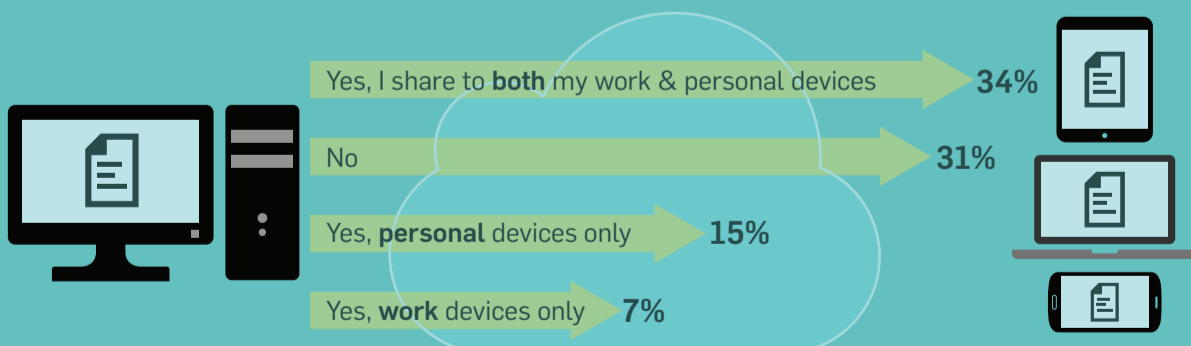

4

Do you use a personal cloud storage or sharing account?

5

Do you use your personal cloud account to share documents between your work computer and any mobile devices (work or personal)?

6

Do you use the same password policy for your personal cloud account as your company does?
